Select Work Experience

Software Developer (Contractor)

(April 2024 – January 2026)

MagMutual | Atlanta, GA

- Designed and built a full-stack data visualization platform that unified and modernized workflow auditing across the company
- Demonstrated skill in React, Typescript, React Query, Zod, React Flow, and D3 on the front-end, as well as Java, Spring Boot, REST APIs, and Postgres on the back-end
- Improved performance by diagnosing rendering bottlenecks, optimizing hooks, data fetching, and payload sizes
- Designed and implemented Postgres database schemas and migrations using Flyway
- Maintained 80% code coverage as a team utilizing JUnit and Jest/Vitest
- Migrated application error tracking and telemetry from Sentry to Splunk

Software Developer

(February 2022 – May 2023)

Epic Systems | Verona, WI

- Responsible for the development of and quality assurance testing for many projects on topics ranging from accessibility and customization to real-time interfacing and performance
- Demonstrated skill in JavaScript, TypeScript, M, C#, and the React framework
- Gained experience with the Agile development cycle
- Lead and organized a bi-weekly division meeting. Responsibilities included: coordinating with developers and quality management to present current development projects, learning topics, quality trends, and team building
- Conducted meetings with customers to coordinate design and features
- Lead development meetings with user experience designers, quality assurance managers, and other developers to discuss design, scope, and integration for development projects
- Served as subject matter expert for real-time prescription benefits, electronic prescription cancellations, and data reporting for my division

Personal Work

Mayfly

(August 2023 – Present)

- Designed and deployed a time-tracking solution for a family farming operation with more than 10 daily active users, replacing manual SMS-based hour reporting
- Implemented role-based access control, securing database rules to protect user data
- Configured multiple environment deployments and CI/CD pipelines using GitHub Actions and Firebase Hosting
- Automated payroll calculations and PDF generation for employee pay summaries

Personal Portfolio Website

(August 2019 – Present)

- Built and deployed a personal website using Firebase Hosting to display past and current projects
- Constructed unique animations using CSS keyframes and JavaScript animation frames
- Demonstrated a strong knowledge of HTML, CSS, JavaScript
- Utilized Git and Git versioning
- Developed proficiency with Linux and Google's Firebase
